

# GIANTmicrobes

from Oliver's  
**GIANT  
microbes**  
...a million times  
actual size!

## SUPERBUGS EAT ANTIBIOTICS FOR BREAKFAST!

### MRSA

You won't find this famous Superbug in the Hall of Justice! It's no hero...

### PNEUMONIA

Looks fun, but at your expense! This microbe infects the air sacs and fills your lungs with fluid.

### PSEUDOMONAS

HP:

Most types live harmlessly in water and soil. But one brutal species has gained powers making it immune to antibiotics!

HP:

Used Antibiotic:  
It's not very effective...

### CLAP

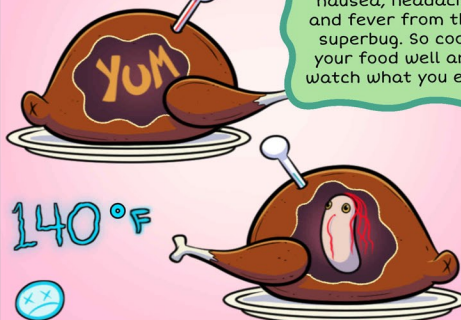

Also known as gonorrhea, this nasty superbug invader is nothing to clap about.

### SALMONELLA

165°F

You'll quickly get sick and tired of the nausea, headache and fever from this superbug. So cook your food well and watch what you eat.

### C. DIFF

You have 1 new infection

This superbug occurs naturally in the environment. Some highly toxic strains found in healthcare settings can cause serious illness.

We are superior and ready to conquer and thrive!

Our powers cannot be beaten by your feeble drugs.

Don't take it so personally, humans. Sure we want to take over your bodies, but where else are we going to live? Our real battle is with your pills, blood cells and antibodies—so bring it on!
